

Protection From Cell Phone Radiation

The potential risks of exposure to the electromagnetic fields of our ever-present cell phones have been much in the news again. I strongly urge you to reduce the impact of EMF by using the BioPro chip. These small and unobtrusive chips help significantly, as I can simply demonstrate to you in my office. Please put them on your own cell phones, and your kids' too. I also encourage you to place them on portable phones at home, as well as desktop and laptop computers. You can pick them up in my office, or I can mail them to you. The cost is \$35 for each chip; no charge for shipping.

If you would like to look at more information on the chip, buy in quantity, or learn about other products, please go to: <http://mybiopro.com/fransussman>
